

Mission AI Academy

Self-paced AI and leadership training for teams

Train your team to write precise prompts, check AI-generated work, analyze data, and plan workflows with human review. Mission AI Academy provides five self-paced modules with saved exercises, scored assessments, and administrator reporting.

Program	What learners practice
AI literacy and foundations	Choose appropriate approaches; understand neural networks, error metrics and emerging tools.
Generative AI and language models	Evaluate text, image and synthetic-data outputs; identify unsupported claims.
Prompt engineering for leadership	Create bounded prompts, action logs and decision-support comparisons.
Workflow automation and data analysis	Map approval gates, clean records, calculate metrics and interpret qualitative feedback.
DoD and federal applications	Apply data boundaries, responsible-AI controls and authorized pilot planning.

Included capabilities

15 original lessons and practical exercises. 25 scored questions across five assessments. Learners save their work and resume. An 80 percent module score and completed exercises unlock certificates. Administrators manage enrollment, monitor individual and cohort progress, and export monthly PDF or Excel reports.

Team subscription

The proposed annual package supports up to 100 learners and up to five separate administrator accounts. Request a written quote for price, deployment, start date, support and terms. No payment or binding order is collected on the product page.

Access and use

Access uses independent email/password sign-in and administrator-issued activation links. Exercises use fictional data and require no paid AI API. Government-network compatibility and procurement eligibility need separate validation; no government approval or endorsement is claimed.
